

ENERGY Turnbed®

ENERGY Turnbed® provides all the facilities that a good night sleep requires, resulting in comfortable and undisturbed rest.

This is a simple and inexpensive solution for increasing the number of beds, making the best choice in all environments associated with shift work. ENERGY Turnbed® enables workplaces to operate with more staff without sacrificing comfort. As each bed in fact consists of two separate mattresses, users do not share the same bed; hence hot-bedding is avoided.

Areas of use for ENERGY Turnbed®:

Any shift work situation where areas are limited and requires space-effective solutions. Typical areas can be offshore facilities, rigs, ships, barracks, guardrooms etc.

- Shift hours
- 1 day side and 1 night side
- No climbing ladders at end of a long working day

During the development and manufacturing process, functionality as well as comfort has been emphasized, resulting in a bed that is easy to use – a simple construction without complicated parts. The structure is very robust and requires no maintenance. For ergonomic purposes, the bed is very easily operated and rotated and sits high from the ground, thus making all aspects of handling easier.

The bed size can be customized according to clients requirements or available space.
